HEARTSTART Onsite Defibrillators are now available!

With more than a half a million units deployed worldwide, more workplaces, schools and communities place their trust in Philips HeartStart AEDs than any other brand when establishing early defibrillation programs.

The HeartStart OnSite Defibrillator is the first defibrillator available for commercial and institutional users without a prescription. As the leader in innovative defibrillation technology, Philips is committed to making defibrillators more widely available so that more lives can be saved. Now with over-the-counter status, Philips is making it easier for companies and organizations to institute early defibrillation programs.

HeartStart OnSite includes proven Philips technologies for heart rhythm assessment (SMART Analysis) and defibrillation energy delivery (SMART Biphasic). And like all HeartStart defibrillators, it can be used to treat adults, as well as infants and children.

**HeartStart Onsite Defibrillator**

Weighing just 3.3 lbs., this small and lightweight defibrillator can be easily carried to the patient's side. Using clear, natural voice instructions, the OnSite Defibrillator guides you through each step of defibrillation and CPR. Integrated SMART pads placed on the patient's bare skin transmit information to the defibrillator, which senses and adapts to your actions every step of the way.
